## SIZE

1 lb to 3 lb  
Custom sizing available

CLAF Bio Fabric contains 96% biobased content, which is the percentage ratio of non-fossil organic carbon. It highly exceeds the minimum standard of 25% set by the USDA BioPreferred® Program for biobased products. It is made with resins based on sugarcane, a highly renewable resource. It is also compatible with the current polyethylene recycle stream. CLAF Bio Fabric provides a sustainable alternative to petroleum based mesh.

Ultratech Mesh is a sustainable mesh alternative that uses less material and fossil fuel in production and transportation.
