

WICKETED MESH

Volm's wicketed mesh bags offer high breathability as well as the ability to pack on automated wicketed baggers. This is achieved by a polyethylene strip on the top portion of the bag. Many mesh colors are available and a one or two side label can be applied. The mesh color can be used to enhance the appearance of the product inside. Available in different mesh types including CLAF[®], CLAF[®] Bio Fabric[™] or Ultratech[®] mesh.

FEATURES

- Very high breathability
- Mesh can improve appearance of produce
- Automated packing
- One or two side label with adjustable size
- Bottom gusset optional
- Available with Ultratech mesh, CLAF or CLAF Bio Fabric
- Automated Packing

MOST COMMON PRODUCTS

- Potatoes
- Citrus
- Peppers
- Onions
- Garlic
- Shallots

PACKING

- Automatic wicket bagger
- Closet[®] Clips

SIZE

1 lb to 15 lb

CLAF Bio Fabric contains 96% biobased content, which is the percentage ratio of non-fossil organic carbon. It highly exceeds the minimum standard of 25% set by the USDA BioPreferred[®] Program for biobased products. It is made with resins based on sugarcane, a highly renewable resource. It is also compatible with the current polyethylene recycle stream. CLAF Bio Fabric provides a sustainable alternative to petroleum based mesh.

Ultratech Mesh is a sustainable mesh alternative that uses less material and fossil fuel in production and transportation.

Wicket: Holes punched in the top part of bag that allow for placement on automated filling machines.

Closet[®] by Bedford: All-plastic bag closure clip.
