

Dual Tote Filler

The Volmpack Dual Tote Filler provides fast, efficient and gentle filling of bulk packaging. With two 4' x 5' staging spaces you have the versatility of filling soft packaging such as 2,000 lb. tote bags or crates of various sizes. The elevator will feed a horizontal conveyor that will distribute product to an individual station. When the package is filled at that station the conveyor will be signaled to reverse direction and begin filling the second tote station. This allows for continuous product flow with no downtime.

Utilizing the cascading rubber chutes, product drops in a controlled manner as it impacts a soft rubber surface which is designed to prevent product damage. The chute will sit in the bottom of the tote or crate and as product begins to fill, an ultrasonic sensor will signal the chute to raise and lower to ensure minimal product impact throughout the filling process.

FEATURES

- Fork pockets for easier handling and moving of equipment
- Durable nylon reinforced rubber chutes
- 2 High quality scales adaptable to metric or imperial measurements
- 4' x 5' checker plate steel scale plates
- Hanger rods to hold tote loops for filling
- Works with irregular crate sizes
- Automatic shut off at infeed conveyor when desired weight is reached or transfer product flow to second station
- Programmable touchscreen allowing user to program desired weight

INFEED OPTIONS

- Elevator Belt
- Raised Conveyor Belt

CAPACITY / RATE

- 1,000 pounds per minute*

POWER

230 Volt, 3 Phase and Ground

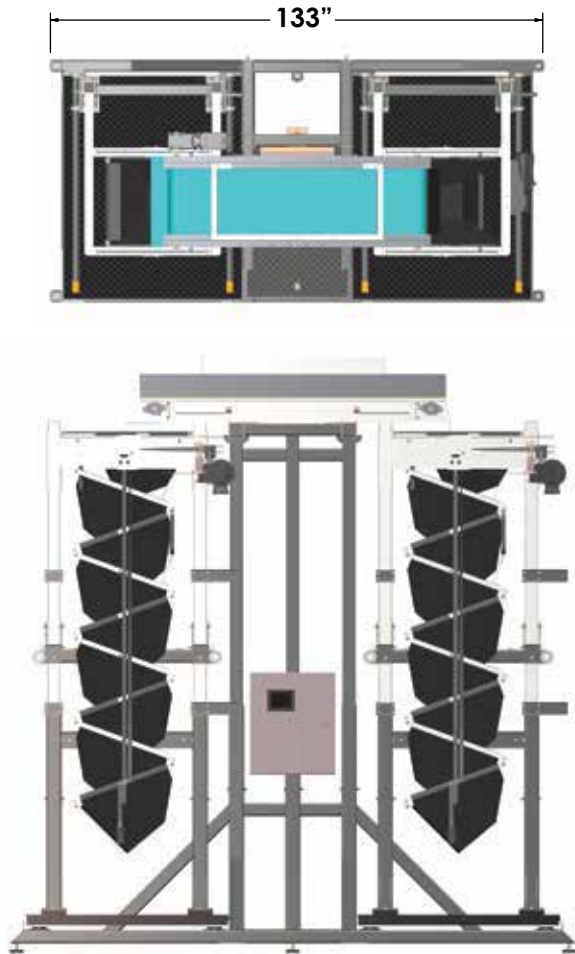

MOST COMMON PRODUCTS

- Potatoes
- Onions

Custom testing available for any product.
