

THE BEST FROM EVERY HARVEST

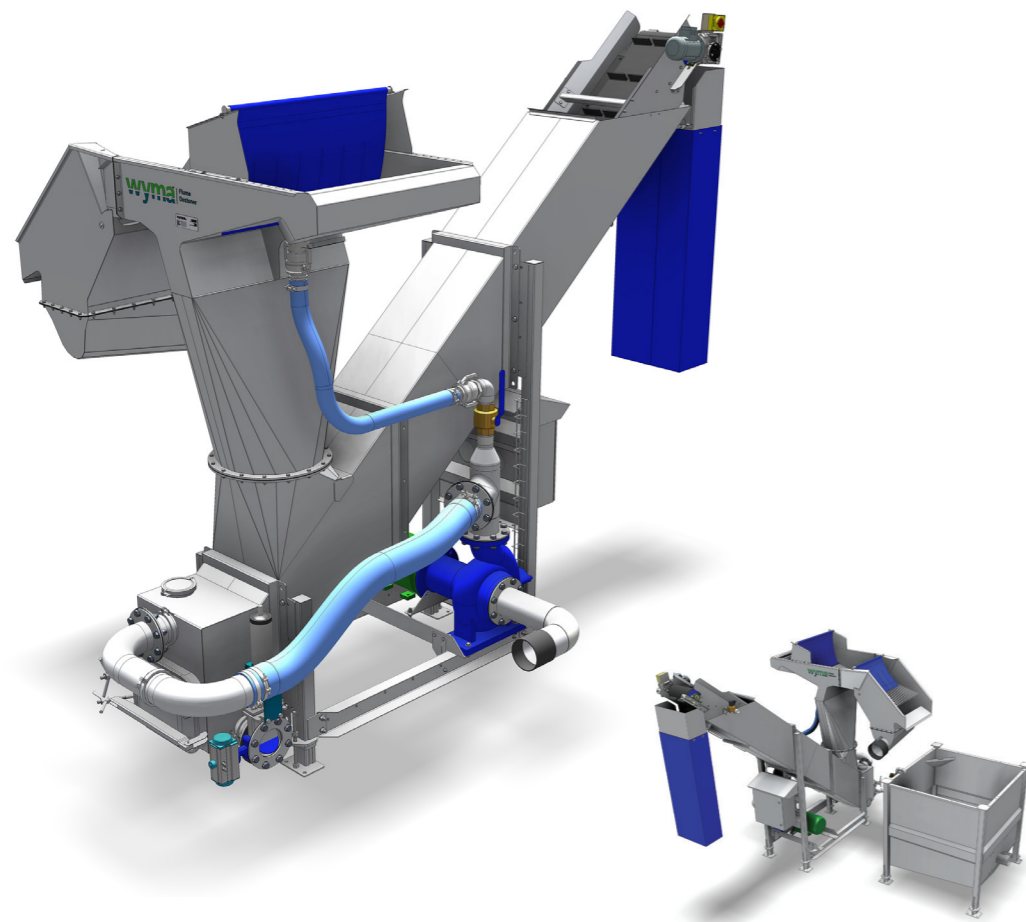

Waste Removal

Flume Destoner

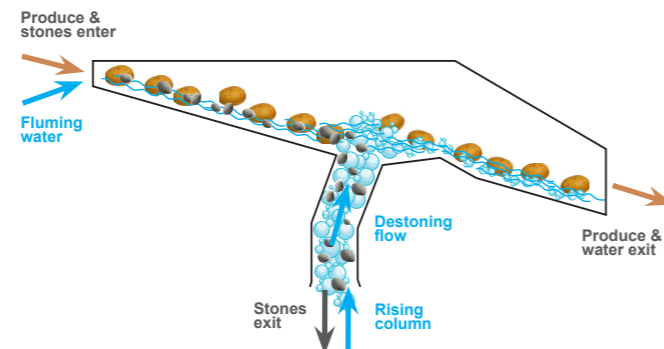

Gently and effectively removes stones from produce flow.

Carrots • Parsnips

Our Flume Destoner removes stones and clods from your produce flow to minimise damage to equipment and produce further down your processing line. It uses the different densities of stones and produce to separate them.

Produce and stones enter together and meet a rising column of water. Produce is conveyed gently across the column while stones fall down the stone duct onto an elevator for removal.

Features and benefits

A Wide destoning channel with dewatering grill

B Water destoning action - rising column of water

C Access hatch

D Curtain

E Dump valve

F Destoning water recirculated

G Waste chute

H Stone elevator

I Touch screen electrical controls

Produce moves straight through

Easy to adjust destoning action

Small footprint

Simple design, no moving parts

Stainless steel construction

Removes stones <150 mm (larger than other models)

Extra time for stones to fall means better destoning

Dewaters produce before next stage in the line*

Excellent stone separation

Gentle on produce; minimal damage

Easy cleaning access

Reduces splashing as produce enters water

Easily flush sludge from bottom of elevator

Water efficient

Stones contained for disposal

Carries stones to waste chute

Easy equipment control

Suitable for batch processing (nothing left behind)

To suit produce and stone density. See results as you go

Fits where other destoning equipment cannot

Reliable and easy to operate. Easy maintenance

Durable and hard-wearing

* Optional
