

THE BEST FROM EVERY HARVEST

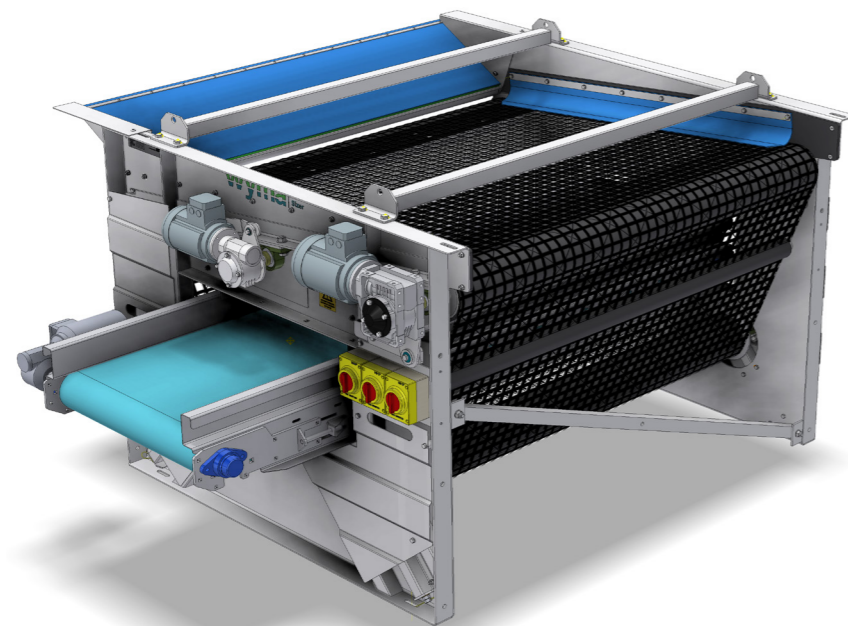

Waste Removal

Screen Piece Remover

Our Screen Piece Remover removes broken pieces and debris from your produce flow.

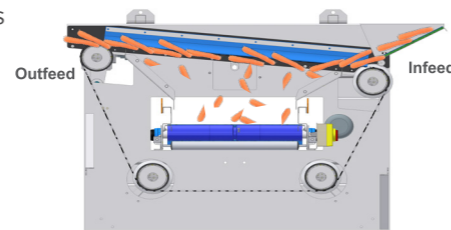

Carrots • Parsnips

Wyma's Screen Piece Remover effectively removes broken pieces, small stones and other debris from produce flow in a continuous process.

It has a rotating screen with holes at a set size. Produce and debris are fed onto the screen and the debris falls through the holes while produce is carried to the outfeed. This process is aided by mechanical shakers that gently vibrate the screen.

An optional cross conveyor can be used to carry pieces away, or to another stage in your line.

Features and benefits

- A Infeed chute*
- B Side deflector
- C Outfeed bed
- D Diamond patterned lagging on drum roller
- E Mechanical shaker
- F Choice of screen types
- G Reversible outfeed conveyor*
