

# VOLMPACK 350 HYBRID Vertical Form, Fill & Seal

The VP350 HYBRID VFFS bagger is specially designed to package fresh produce. The Hybrid Bagger is constructed with a horizontal seal system that utilizes servo motors for high sealing forces, allowing it to run heat-sealable papers. Along with paper, it will also run materials such as laminated films, polyethylene, polypropylene and panel bags constructed with mesh and labels. Another aspect of the Hybrid is the ability to change over between different sealing systems quickly maximizing the efficiency of the bagger by tailoring it to the material being run. These speedy changeovers and small footprint provide high flexibility per square foot in your packing facility.

## VOLMPACK 350 HYBRID STANDARD FEATURES

- Full stainless steel constructions and composite materials
- Siemens PLC control with Volmpack Smart Display
- Integrated modem for online monitoring
- Forming set (size to be specified)
- Printer frame for standard thermo transfer printer
- Photocell for bag length detection with pre-printed film
- Complies with CE safety regulations, with security screens and safety sensors on doors and all moving parts
- Automatic film-tracking

## AVAILABLE MACHINE OPTIONS (DEPENDING ON MODEL)

- Airpressure unit
- Product protection cushions
- Easy opening knife in seal
- Vacuum unit (different options)
- MAP connection
- Chain bags perforation
- Film splice unit (tape/seal)
- Water injection
- Luminescence sensor film mark detection
- Heating electrical cabinet
- Perforator (different options)
- Handgrip in bag
- Quattro seal system
- 2-in-1 Pack™ system
- Label applicator
- Thermo transfer printer
