

Unique, high-performance
optical sorter

SORTOP POTATOES

VP03-W

Volm Companies is your
North American Official Distributor of

UISAR
SORTING  and it works

Your advantages:

- Worldwide unique, intelligent software
- Highly precise calibration (diameter, length and weight)
- 6 outputs, customized solutions
- 360 ° HD analysis, unsurpassed sorting quality
- Maximum profitability and efficiency

Intelligent software - acts as a human being

The principle is based on artificial intelligence, which enables the subjective evaluation of the quality, shape and appearance of each potato and thereby **replicates the human appreciation**. Combined with other measurable criteria (the slightest defects such as wireworm damage for example), this setting allows the fine-tuning of the sorting accuracy.

- Statistics function
- Complete traceability of each batch
- Perfect integration of the computer and the electrical control built into a waterproof control cabinet

A person evaluates the quality of the vegetables by precisely visualizing and analyzing the entire surface.

Its assessment is global by combining both quantifiable and subjective information.

Quality criteria may vary based on business needs.

A human being is able to adapt the quality of his sorting, but his constancy decreases with fatigue.

The machine is able to reproduce the work of a human more consistently and more efficiently.

All types of tubes and even carrots

The software Visar VACS is able to adapt very fast: **Washed and peeled potatoes as well as carrots**. The change of the product is easily possible in one click. The mechanical elements are designed to resist dust.

Feeding system - increased hourly sorting capacity

A simple and ingenious rotating system aligns potatoes and carrots of all sizes, smoothly and almost without any duplicates.

The sorting capacity is **at 1.40 m (4 ft 7 in) potatoes per second**.

The weight of 1.40 m (4 ft 7 in) potatoes per second extrapolated to one hour results in the hourly sorting capacity.

Optical system - highly precise 360° analysis

Thanks to a mirror system and a very powerful all-round lighting that eliminates shadows, **every vegetable is subjected to a perfect 360° analysis.** The optical system generates 3 immaculate high-resolution images of each carrot. These can be displayed immediately on the computer screen to check the error detection.

- High-resolution color and infrared camera, error detection from 0.16 mm²
- Calibration accuracy at 20 to 90 mm square mesh grading; calibration by the weight of each tuber with a 5% accuracy
- **Visualization of images with display of error detection**
- Accepts all shapes of potatoes and carrots

5 quality levels

The software allows an easy setting of 5 quality levels (plus waste). The volume and value of the product sold is increased and waste is reduced to a minimum. Thanks to the accuracy of the setting and the unique sorting consistency of the software, **a significantly higher yield per batch is achieved.**

Ejection - gently & exactly

A nozzle system blows the potatoes and carrots towards the assigned outputs with extreme precision. The fall is cushioned by soft materials that **guarantee a smooth landing.**

Up to 6 outputs

The machine is equipped with 6 outputs: 5 of them can be freely parameterized and one is used for the waste. The products of each exit are passed onto individual conveyor belts. The sorting criteria can easily be adapted to the specific needs of each customer.

Technical data

Material:

- Stainless steel
- Food compliant

Switch cabinet:

- CE/UL standards
- Waterproof cabinet

Dimensions:

*Measurements are rounded off to the nearest inch.

Our promise

- Highly precise sorting, calibration & weighing
- Swiss quality
- Easy handling
- Low production and maintenance costs
- Same harvest - more yield
- Quick and easy cleaning
- Efficient remote maintenance
- Competent and fast service
- Customized solutions
- Less food waste
